

Foliar Relief

3-7-18

Foliar Relief 3-7-18 is developed to provide maximum plant response during periods of drought, heat, and disease pressure. Foliar Relief contains Multi-forms of phosphorus, high concentration of potassium and key micronutrients necessary for turfgrass to thrive during summer stress. High quality turf when treated with Foliar Relief 3-7-18 will respond with increased photosynthesis and improved overall vigor.

Foliar Relief 3-7-18 Zn Mn

- Quickly absorbed phosphite fertilizer
- Energizes plant through increased ATP production
- Increases plant antioxidant production helping guard the plant from free radical destruction
- Increases plant metabolism enabling the plant to quickly repair cell damage
- Zn provided for optimal antioxidant formation
- Mn provided for optimal photosynthesis
- High potassium content for increased cell strength, better drought tolerance and disease tolerance.

Guaranteed Analysis

Total Nitrogen (N).....	3.0%	Boron (B)	0.02%
3.0% Urea Nitrogen		Iron (Fe)	0.10%
Phosphate (P2O5).....	7.0%	Manganese (Mn).....	0.10%
Soluble Potash (K2O).....	18.0%	Zinc (Zn)	0.10%
Derived From: Urea, phosphorus acid, Tetra potassium pyrophosphate		Derived from Boric Acid, Iron HEDTA Manganese EDTA, and Zinc EDTA	

Use Rates

Cool Season Greens & Tees: Apply 3.0 to 6.0 fluid oz. per 1000 sq. ft. every 7 to 14 days throughout growing season.

Warm Season Greens & Tees: Apply 4 to 8 fluid oz. per 1000 sq. ft. every 7 to 14 days throughout growing season.

Fairways and Athletic Fields: Apply 1.5 to 3.0 gallons per acre every 7 to 14 days throughout the growing season.
